Draft: rupee rates are vendor-reported, confirm in Meta

WhatsApp Cost Sheet

What WhatsApp costs Splashjet each month through the Cloud API, the limits that apply, and what it costs to put a number on both the Business app and Waba. Change any box and every figure updates.

Your assumptions

Starting values come from your answers: about 1,000 customers a month, half started by you, occasional campaigns of a few thousand messages.

VOLUME PER MONTH

Customers you chat with

1000

Your plan said 1,000 to 10,000

Chats you start (%)

50

With a template; the rest write first

Your replies per customer-started chat

6

Free-text messages you send

Customers who answer your template (%)

60

Your replies once they answer

5

Templates per chat you start

1

Utility: follow-up, dispatch, payment

Marketing messages

2000

Campaigns and offers

PHONE AND NUMBERS

Replies typed in the Business app (%)

50

Free; only for coexistence numbers

Agents with their own number (setup C)

3

Plus one shared API number

META RATES (INR, BEFORE GST)

Marketing, per message

0.8631

Vendor-reported; confirm in your rate card

Utility, per message

0.115

Vendor-reported

Service, per message after the free ones

0.115

Assumed equal to utility; confirm

Free service messages per number

1000

Per business phone number, per month

GST (%)

18

Vendor-reported; confirm on your invoice

Monthly cost by setup

All figures include GST. Messages you type in the Business app cost nothing; messages sent from Waba are charged by Meta.

SETUP A

One API-only number

Everything happens in the ERP inbox. The phone cannot use the Business app on this number.

₹2,580 a month

₹30,957 a year, including GST

Replies · Utility templates · Marketing

Replies sent from Waba	4,500
of which charged	3,500
Replies cost	₹403
Utility templates (500)	₹58
Marketing (2,000)	₹1,726
Before GST	₹2,186
GST 18%	₹394
Total each month	**₹2,580**
Without marketing	₹543

SETUP B

One coexistence number

Phone chats are free in the Business app; the ERP uses the same number through the API.

₹2,274 a month

₹27,293 a year, including GST

Replies · Utility templates · Marketing

Replies sent from Waba	2,250
of which charged	1,250
Replies cost	₹144
Utility templates (500)	₹58
Marketing (2,000)	₹1,726
Before GST	₹1,927
GST 18%	₹347
Total each month	**₹2,274**
Without marketing	₹237

SETUP C

3 agents' numbers plus one shared API number

Each agent keeps the app on their own number (separate accounts). A shared API number sends notifications and campaigns.

₹2,105 a month

₹25,257 a year, including GST

Replies · Utility templates · Marketing

Replies sent from Waba	2,250
of which charged	0
Replies cost	₹0
Utility templates (500)	₹58
Marketing (2,000)	₹1,726
Before GST	₹1,784
GST 18%	₹321
Total each month	**₹2,105**
Without marketing	₹68

Marketing is 79% of the bill in setup A. Chatting with customers costs ₹543 a month including GST; campaigns add ₹2,037.

Coexistence saves ₹305 a month for one number (B) and ₹475 with separate agent numbers (C). At this volume the saving is small. Choose it for the way people work, not to cut cost.

A campaign of 2,000 marketing messages is more than a new business may start in one day (250). Until the business is verified, spread it over about 8 days, or verify the business to reach the 2,000 level.

Not yet confirmed: whether a coexistence number can send marketing through Meta's marketing API, and the rupee rates themselves. Setups B and C assume it can.

If volume grows

Monthly total including GST, with every other assumption above unchanged.

CUSTOMERS A MONTH	SETUP A	SETUP B	SETUP C
1,000 customers	₹2,580	₹2,274	₹2,105
3,000 customers	₹3,937	₹3,021	₹2,614
10,000 customers	₹8,686	₹5,633	₹5,226

Limits that apply

LIMIT	VALUE	WHAT IT MEANS FOR YOU
Messaging limit (customers you may start a chat with in 24 hours)	250, then 2,000, 10,000, 100,000, unlimited	A new business starts at 250 and rises by verifying the business or sending 2,000 quality template messages in 30 days. It is shared by every number in the portfolio. Meta: messaging limits
Registered numbers	2, rising to 20	Rises when the business is verified or reaches a 2,000 limit. Whether a coexistence number counts is not stated. Meta: phone numbers
Sending speed per number	80 per second, up to 1,000	A number used with the Business app is fixed at 20 per second, which is plenty at your volume. Meta: throughput
Templates	250 unverified, 6,000 verified	At most 100 new templates an hour. A template that gets poor feedback can be paused. Meta: templates
Marketing per customer	No fixed number; adjusts automatically	Too many marketing messages to one person fail with error 131049. US numbers receive no marketing. Meta: per-user limits
Free service messages	1,000 per number per month	Free-text replies inside the 24-hour window. Beyond that they are charged. No rollover. Meta: pricing, from 1 October 2026
The 24-hour window	Opens when the customer writes	Opens or restarts only on a customer message. A template does not open it; a message typed in the Business app does not extend it. Meta: coexistence and pricing
Phone must stay in use (coexistence)	About 14 days	Meta disconnects a coexistence number if the phone's app is not opened for about 14 days. Linked devices: 30 days. Meta: coexistence events

What Meta charges to set up

Meta charges per delivered message. For everything below, its pages state no fee. That is not the same as confirmed free.

Create the business account	No fee stated
Add or register a number	No fee stated
Business verification	No fee stated
Display name, templates	No fee stated
Put a number on both the Business app and the API (coexistence)	No fee stated
Using the Cloud API itself	Messages only
Green tick	Conditions 30 days on the platform, verified business, approved display name
A provider doing the coexistence setup	Their price One vendor lists plans at INR 500 and INR 1,499 a month. Not applicable if you onboard yourself.

Costs outside Meta

- **Phone numbers and SIMs:** a number for each agent, plus one shared API number in setup C. Telecom prices are not part of this sheet.
- **Handsets:** each coexistence number needs a phone with the Business app, opened at least every two weeks.
- **Server and hosting:** Waba runs on your existing ERP server, so no new charge is expected.
- **Billing in rupees:** Meta requires eligible customers to move to INR billing by 31 December 2026. Whether that covers you, and which payment methods work in India, are not confirmed.
- **Marketing moves to a separate Meta API on 13 October 2027.** Same number and same price model; Waba will need that when campaigns are built.

Please confirm before relying on these figures

- **The rupee rates.** Meta's India rate card is a download whose figures I could not read. The values here come from vendor articles (marketing about INR 0.8631, utility and authentication about INR 0.115, before 18% GST). Open the INR rate card in Meta Business Suite and correct the boxes above.
- **The service rate after the free 1,000.** Meta calls it "fixed, per published rates". I assumed the utility rate.
- **Whether a coexistence number can send marketing** through Meta's marketing API. Meta's pages do not say.
- **How coexistence is set up for you.** Meta says a Solution Partner or Tech Provider runs the onboarding. A route for a company's own number is not described, and the limit of one number per coexistence account (four per business) comes from a provider's documentation, not Meta.
- **Invoices:** GST, prepaid or invoiced billing, spend limits and India payment methods are not on any page I could read.

Sources: Meta pricing, messaging limits, throughput, phone numbers, coexistence, marketing messages API. Vendors: INR rates, rates and GST, coexistence accounts.

Prepared 30 October 2026 from Meta's developer documentation and vendor articles. Every figure is a forecast, not a quote.
